### Group Evaluation

My group member for the final project was Connor Bentzley and we chose Parallel Programming as our topic. We split the workload up evenly, I was responsible with the first half of the topics in the report along with “Project One: Intro to parallel computing” and Connor was responsible for the second half of the topics in the report along with “Project Two: Cache improvements”. I believe Connor and I worked very well together, we communicated well and each brought a strong work ethic to the group. In regards to my evaluation of Connor, in my opinion he was an excellent group mate, he was easy to communicate with, completed his portion of the project on time with no issues, and his portion of the project was very well done. In terms of a grade I would give Connor 100%, I could not have asked for a better teammate.
